

TASK 2

Name: Bharathidasan B

Mail-Id: bharathidasan9629@gmail.com

Task Title: Landing Page

Task Description: To develop a Compelling Landing Page. The goal is to choose a design and theme that resonates to me and develop a landing page for an event or launch.

Steps Taken: Discovering an event for the landing page. Decided to make a landing page for my college symposium. Collecting the required contents for my landing page. Building the skeleton of the webpage using HTML. Researching for attractive element for styling the Title [ELECSTA]. Adding Remaining styles and correcting the alignments of the webpage. Most importantly Customizing the web page for mobile using Media screen. Verifying the alignments and correcting the styles for both Desktop and Mobile version of Webpage.

Challenges Faced: Identifying the style for the Title and Customizing it for our page. Understanding the animation in CSS. Faced issues in styling the parent and child classes and ID's. One of the hardest things I faced is developing the countdown in the web page. Learning JavaScript function. Customizing the webpage for mobile version.

Solutions Implemented: I searched styles for my title in YouTube and properly customized for my webpage. After many attempts and try's, I resolved the styling issues of parent and child by using the Developer tools in the Browser. From the Developer tool I can understand which styles are not attached with the tags and resolved it. I used media screen for customizing the webpage for mobile.

Learnings: Understood animate in CSS. Found how to style parent and child classes. Discovered developer tools more. Understood how media screen works. Learnt some of the JavaScript functions. Learnt how to build the countdown function.

Project Update: I Have created a Responsive Company Member Team Page and Now Built a Landing Page and eagerly waiting for task 3.
